The Origin of Chinese Characters - Chinasage Jul 26, 2018 · History of Oracle Bone Research. Oracle bones were first identified in the late 19th-century, at archaeological sites such as Yinxu, a late Shang Dynasty capital near Anyang. Although their role in the invention of Chinese writing is still being debated, research into the large caches of oracle bones has demonstrated how the script developed.

Oracle Bones - National Museums Scotland Much of what we know about the Shang comes from oracle bones. These were bones that the Shang used to try and determine the future. Religious men would write a question on one side of the bone and then burn the bone until it cracked. They would then interpret the cracks for the answers and write the answers on the other side of the bone.

Oracle Bones: Predicting the Future in Shang, China Feb 26, 2016 · Oracle Bones (also known as Dragon's Bones) were the shoulder blades of oxen or plastrons of turtles (the flat, underside of the turtle's shell) which were used in the Shang Dynasty of China (c. 1600-1046 BCE) for divination. The symbols carved on the bones eventually became words and a recognizable Chinese script developed from this practice. A fortune-teller would carve (later, ...

Oracle bone - Wikipedia Oracle bone script (Chinese: 甲骨文) was an ancestor of modern Chinese characters engraved on oracle bones—animal bones or turtle plastrons used in pyromantic divination—in the late 2nd millennium BC, and is the earliest known form of Chinese writing. The vast majority, amounting to about 150,000 pieces, were found at the Yinxu site located in Xiaotun Village, Anyang City, Henan Province.
